Backend Software Engineer

at Top Technologies, Inc.

Los Angeles, CA

Top Technologies, Inc. is a student success company. Our mission is to enable students everywhere to succeed through personalized tools that help them produce, connect, and engage.

Our core product, Top, is the first student planner that can automatically schedule, prioritize, and track assignments and exams—thereby helping students increase their productivity and decrease their stress.

We are looking for a talented Backend Software Engineer to join our mission-driven team. As a Top Performer, you will design, build, and maintain scalable systems and services that deliver unparalleled product value to our student users.

Requirements

- Alignment with Top's Mission, Vision, and Core Values
- Demonstrated experience configuring and deploying Amazon EC2 (or analogous cloud computing service)
- Demonstrated ability to design, build, and maintain custom web services
- Demonstrated proficiency in Swift, Objective-C, Python, or other object-oriented programming language
- Demonstrated experience deploying and managing Amazon RDS (or analogous relational database) with MySQL
- Demonstrated ability to produce performant code-based comments and stand-alone technical documentation
- Demonstrated experience with GitLab (or analogous version control service)
- Deep understanding of computer science fundamentals and related best practices (data structures, algorithms, distributed systems, etc.)
- Demonstrated ability to effectively communicate technical concepts to engineers and non-engineers, verbally and in writing
